renv.lock

- To collaborate on files (e.g., R scripts), every project member synchronizes their local repository with a remote server repository (GitHub, GitLab,...) to stay up-to-date

- This repository can be shared

REMOTE REPOSITORY STAGE

Central server remote repositories (e.g., **GitHub** and **GitLab**)

- Project members **pull** raw data (from database) and scripts (from remote repository), query analysis-ready cohorts and analyze the data
- Every **local** analytical step is tracked via git
- Changes are **pushed** to *remote repository*

Project member 1

Project member 2

Project member 3

LOCAL ANALYSIS STAGE

RAW DATA STAGE

Data stored as flat files or in a relational SQL database on a briefcase directory or (cloud) server
